### INTERNATIONAL SCIENTIFIC CONFERENCES

Technology, Applications & Opportunities  
11 - 12 April 2018  
Estrel Convention Center, Berlin, Germany

11–12 April 2018, Berlin. This event is the most commercially-focused conference and exhibition on graphene and other 2D materials. It is where companies unveil their latest technologies, launch their products, where technologists announce their latest commercially-relevant results, and where suppliers and end users from a variety of industries directly connect. New: Networking match making platform – connect with attendees and organise meetings in advance of the Event Focus focus on commercial progress, real application development, and commercially-relevant innovation Connect suppliers and customers from a variety of end user industries Accelerate value chain creation by co-hosting suppliers, intermediary compounders/formulators, end users Cross-fertilise business by co-locating with highly synergetic events such as printed electronics, wearable technologies, electric vehicles and 3D printing Analyst-designed agenda and networking opportunities.

Event Focus focus on commercial progress, real application development, and commercially-relevant innovation Connect suppliers and customers from a variety of end user industries Accelerate value chain creation by co-hosting suppliers, intermediary compounders/formulators, end users Cross-fertilise business by co-locating with highly synergetic events such as printed electronics, wearable technologies, electric vehicles and 3D printing Analyst-designed agenda and networking opportunities.

What is Graphene & 2D Materials? The graphene industry is going through an interesting period. The number of suppliers has grown, resulting in increased production capacity worldwide. There is continued appetite for investment and the end user interest in graphene and its potential grows surprisingly fast. End-users from many industries now want to evaluate graphene and suppliers are increasingly building up very robust pipelines. The go-to-market strategy is still largely based on substituting existing materials. Here, graphene is still in the realm of offering more for more (or the same at the best) although a more-for-same value proposition may soon be reached if cost reductions exceed their current rapid trajectory. The first wave of products has already hit the markets. Most are small volumes and somewhat gimmicky, capitalising on the good brand of 'graphene'. The best however is to yet to come as new applications steadily make their way through the long and winding qualification tunnels.

The IDTechEx Show! Graphene & 2D Materials is co-located alongside a series of synergistic events on printed electronics wearable, 3D Printing and electric vehicles. Each of these is a full two-day executive conference, co-located with a common exhibition. We co-locate these events because there is strong overlap across these topics, exposing you to the full relevant supply chains and customer and supplier bases, saving you time and money from attending separate events.
